

Assignment Reflection

English Second Language | Grades 10–11 | Writing Skills: Email

Reflection on the Use of ICT in Teaching and Learning

Developing the English Second Language website helped me consider how information and communication technology (ICT) can support the teaching of writing skills. The lesson focuses on formal and informal email writing. I organised the website into sections covering learning objectives, lesson content, teaching aids, the lesson plan, activities, assessment, learning support, digital citizenship and sources. This structure is intended to make the material easier for learners and teachers to navigate.

The teaching approach combines explanation, demonstration, guided practice and assessment. A model formal email can be displayed using a laptop and projector so that learners can identify the recipient, subject, greeting, body and closing. Comparing formal and informal emails helps learners understand that language and register should suit the audience and purpose. The planning activity allows learners to organise ideas before writing, while the assessment asks them to request permission from the principal for a school event.

ICT supports learning by making the lesson content available digitally for learners to revisit. Clear headings, organised sections and text-based explanations can help learners review concepts at their own pace. The assessment and memorandum provide a structured way to check understanding and guide feedback. The website also includes simplified instructions, a visual model and a readable layout to support different learning needs. These features can help learners, although they do not replace individual support from the teacher.

One challenge is ensuring that the content is clear, accurate and accessible on different devices. A website may look different on a computer, tablet or phone, and interactive features may not transfer directly when material is recreated on another platform. Assessment also requires clear instructions, reliable scoring and a suitable way for a teacher to mark the written response. Curriculum details and references must be checked and completed rather than left as placeholders.

In future, I would test the resource on different screen sizes, check all navigation links, and ask a teacher or learners to review the instructions. I would verify the lesson content against the relevant official syllabus, provide accurate references, and ensure that assessment feedback is useful. Overall, this project demonstrates that ICT can support email-writing instruction when digital tools are used purposefully alongside teacher guidance, practice and feedback.
